

press release

Allied PhotoChemical publishes article: "How to Properly Maintain your UV Production System" in the Spring issue of RadTech Report.

Allied PhotoChemical provides guidance and information to the UV Industry.

MARYSVILLE, MI – March, 2010 – Allied PhotoChemical, Inc. has written an article entitled: "How to Properly Maintain your UV Production System" for the industry-leading RadTech Report.

Allied PhotoChemical has long delivered successful UV Technology Solutions to its customer base," said Dan Sweetwood – Vice President of Sales. "And felt it was necessary to provide a framework for the continued optimization and success of these UV installations by providing an easy-to-read article highlighting industry-best practices."

"These industry-best practices were captured after talking to the industry leaders; namely Finishing Technology Solutions, DoctorUV and EIT – All three being industry leaders in their vertical markets," said Michael Kelly – CEO / President. "Plus, numerous conversations / interviews were held with customers to draw upon their experience and feedback on their specific UV Technology installations."

For a copy of the article, please contact Dan Sweetwood at Allied PhotoChemical, Inc.

About RadTech

RadTech International North America, a non profit organization, is the association for the advancement of ultraviolet and electron beam (UV & EB) technology. RadTech serves as an industry forum, addressing the educational needs of the users and suppliers of UV and EB equipment and materials. Our members also represent end user companies in several industries including: Adhesives, Composite Applications, Converting/Packaging, Decorative Applications, Dental Restorations, Electronics/Electrical, Flooring, Graphic Arts (inks, high-gloss varnishes), Opto Electronics, Metals, Photoresists, Plastics, Rapid Prototype Parts Manufacture, Release Coatings, Steel Pipe, Tubing, and Wood Finishes.

About DoctorUV

DDU Enterprises is your one stop solution for today's manufacturing engineers. DDU is your "Technology Broker" linking engineers together with solutions to their manufacturing challenges. We started in UV equipment but found that there were technical components needed before and after the UV section to "make the process work". We found at that time, there were very few people capable of understanding how these varied components need to work in unison. DDU has learned how to put them all together, a cost effective, repeatable, and validated manufacturing process. DDU can help you with proper substrate/adhesive/coating selection, surface preparation or modification, ink/adhesive/coating application, drying/curing, identification, process validation and preventative maintenance. DDU offers technical solutions to complex problems. DDU's staff and management has over 70 years of combined experience in helping manufacturers get their products to market and to keep their equipment operating properly.

About EIT

EIT is a full-service contract electronic manufacturing services firm. It serves the instrument market through the design, production, and distribution of equipment that measures and tracks process control information in UV applications. EIT radiometers and on-line monitoring equipment provide UV users with the widest choice of instruments on the market. The radiometers are NIST traceable and most are available in a choice of four standard wavelengths.
